

Medilase Laser Clinic A Leading Centre for Medical Laser Excellence

Medilase Laser Clinic is one of Slovenia's most established centres for advanced laser treatments and medical aesthetics. Located in Ljubljana, the clinic combines over two decades of experience in laser technology with a strong medical foundation and a commitment to safety, precision, and natural-looking results. The space itself reflects professionalism and discretion, offering patients a calm and modern clinical environment.

Comprehensive Dermatology and Skin Health

Dermatological care is at the core of Medilase's expertise. The clinic provides thorough skin examinations, early detection of skin cancer, hair and scalp issues, removal of benign skin lesions, and treatment of conditions such as acne, rosacea, pigmentation and scarring. Special attention is also given to rejuvenation. Each procedure is carried out by qualified medical professionals, ensuring clinical accuracy and long-term skin health.

Advanced Laser and Aesthetic Treatments

Medilase is known for its state-of-the-art Fotona laser systems, which allow for highly effective yet minimally invasive procedures. Services include laser hair removal, skin rejuvenation, reduction of vascular and pigment lesions, scar treatment, and tattoo removal. All treatments are individually tailored according to skin type and specific concerns, maximising safety while minimising downtime.

One of the clinic's standout procedures is the Fotona 6D treatment protocol, an advanced, noninvasive laser approach that integrates six complementary modalities: Frac3®, Piano®, Intraoral®, Peeling®, LipLase®, and SmoothEye®. It

is ideal for patients seeking visible rejuvenation without injections or surgical intervention.

Comprehensive Medical Care and Regenerative Therapies

Beyond aesthetic treatments, the clinic also provides comprehensive medical services focused on women's health, diagnostics, and pain management. These include routine gynaecological examinations, laser treatments for urinary incontinence, vaginal atrophy, and pelvic organ prolapse, as well as a wide range of ultrasound diagnostics, including breast, abdominal, vascular, lymph node, and soft tissue examinations. In orthopaedics, we offer specialist consultations and advanced regenerative approaches for chronic pain.

A Patient-Centred Philosophy

What truly sets Medilase apart is its individualised approach. Every treatment begins with a detailed consultation, ensuring transparency, realistic expectations, and personalised care.

By uniting innovation, expertise, and trust, Medilase Clinic provides a comprehensive destination for safe, effective, and medically guided aesthetic solutions.
